WORKING PAPERS

- **Migration in a Warming World: A Dynamic Discrete Choice Model of Climate-Induced Mobility:** I study the interaction between climate and migration in a dynamic discrete choice setting. Preliminary results indicate that societal-level adaptation can be quite important, and that accounting for forward-looking behavior leads to dramatically different end-of-century predictions than those that abstract away from dynamic considerations.
- **The Impact of Maternal Exposure to PFAS on Infant Health Outcomes (with Wesley Howden, Bo Guo, Ashley Langer, and Derek Lemoine):** We estimate the causal impact of maternal exposure to per- and polyfluoroalkyl substances (PFAS) on infant birthweight, preterm births, and neonatal deaths in Upstate New York. We are currently expanding on these results with the use of geocoded microdata.
